

SAMSUNG

Ultimate flexibility Freedom to do the work that matters

Flexible working means letting teams work in a way that suits them. So, shouldn't their computing devices be flexible, too?

That's why we've developed our new range of Galaxy Books. Built on our mobile heritage and expertise, they've been specially designed for a new world of work. With light, durable and highly portable hardware, they let anyone, anywhere connect to almost anything, giving you new levels of freedom and flexibility at work.

And, with our dedicated UK-based free Business Service Centre, you can get even more from our range. We offer unlimited technical support on everything from hardware to software and integration with third-party tools.

Mobile-first design

Portable and durable devices that can go the distance.

Our products are designed to let you work anywhere, anytime. Light and ultra-thin with long battery life and Wi-Fi 6E connectivity, they're perfectly suited to a hybrid workforce. The compact USB C charger is also compatible with your Galaxy smartphone, meaning there's less to carry when you're on the move. Durable hardware can withstand knocks, scrapes and bumps, while specially designed microphones and cameras make video calling easier than ever.

World-class components

Reliability and performance in every part.

Have peace of mind with devices that won't let you down. We assemble our own parts in our own factories, giving you outstanding levels of reliability, performance and support. From silicon chips to DRAM memory, SSD storage, OLED screens, batteries and software, you can trust in every part. But we're always looking for ways to improve. In 2021 alone we invested \$18.6 billion in research and development, and in 2020 we were named the world's largest patent holder.¹ So, whatever your business challenges, you can rely on us to help you overcome them.

Security at the core

Protect you and your data from the chip up.

Samsung Galaxy Books have everything you need to stay secure. Selected devices also come with enhanced security below the operating system level. This combines a hardware security chip and Samsung Enhanced Security including tamper alert and BIOS auto-recovery, giving you exceptional levels of protection and peace of mind. In addition, we offer the highest levels of security through Intel vPRO and Microsoft Secured-Core PC² technology.

All our Windows devices can also be enrolled onto Microsoft Endpoint Manager, which seamlessly connects to Knox Manage and helps your IT teams configure and remotely deploy devices.
